Ali Haroon

Denver, CO (open to relocation) | aharoon3737@gmail.com | linkedin.com/in/aliharoon- | github.com/Ali-Haroon3 | US Citizen

EDUCATION

University of Colorado Boulder *2026*
B.S. in Computer Science; Minor in Biochemistry; GPA: 3.7 *Boulder, CO*
Leadership: President, Kappa Theta Pi (professional tech fraternity), grew membership 220%; IT Director, Alpha Kappa Psi

EXPERIENCE

Visa *Jun 2026 – Present*
Software Engineer, Product Reliability Engineering *Highlands Ranch, CO*
- Created Vital Signs MCP with one other engineer: autonomous AI agents that run automated code reviews and power a chatbot for internal teams and external clients
- Partnered with clients to scope and ship custom changes to Angular and React front ends; wrote Storybook- and Jest-tested components for a ground-up Angular 19 redesign
- Trained ML models for transaction research that cut the error rate from 0.8% to 0.5% (37.5% fewer errors)
- Hardened the Spring Boot APIs behind a real-time transaction-monitoring platform, reducing downtime; ran its security audits

openfloor (opnflr.com) *Jun 2026 – Present*
Co-Founder & CEO *Denver, CO*
- Co-founded a physical-AI data platform, now in private pilot: contributors record task demonstrations on their own iPhones, and robotics labs get reviewed, versioned training datasets (video, camera pose, LiDAR depth, hand-pose estimates)
- Built iOS replay and annotation features (Swift, ARKit, Metal) and the contributor and data-studio web apps (Next.js, TypeScript, Supabase/PostgreSQL) for accounts, earnings, task pricing and resumable capture uploads
- Ran customer discovery with robotics researchers at CMU, UC Berkeley, UW–Madison, Waterloo, UCL and Colorado School of Mines; secured a capture-pilot LOI from Corvus Investment Group, a PE firm that owns construction and real estate companies

Vantor (formerly Maxar) *Jun 2025 – Aug 2025*
Software Development Intern *Westminster, CO*
- Developed real-time monitoring across 6 satellite ground stations, streaming high-frequency telemetry at sub-second latency
- Implemented Spring Boot REST APIs (Java, Kubernetes) for low-latency telemetry access and real-time inference endpoints

CUChange *Jul 2025 – May 2026*
Data Management Research Assistant *Boulder, CO*
- Automated Python pipelines (pandas, SQL, REDCap API) that ingest and clean heterogeneous research data for reports
- Designed reproducible Python/R workflows on PostgreSQL (GCP), improving report generation speed 300%

ReportsNow (JD Edwards ERP reporting software) *May 2024 – Jul 2024*
Software Engineering Intern *Greenwood Village, CO*
- Built a C#/ASP.NET Core and React analytics app consolidating data from 125+ client systems; cut reporting time 40%
- Wrote its REST APIs and optimized the SQL Server queries behind them; shipped with Docker via Azure DevOps CI/CD

PROJECTS

Weather Prediction Markets | *Rust, Python* *github.com/Ali-Haroon3/Polymarket-Weather-Predictor*
- Built a daily pipeline logging Kalshi and Polymarket weather-market quotes against multi-model forecasts for 35+ cities
- Caught phantom fills inflating dashboard profits; without them the model had no edge, and the market's own forecast beat it
- Pivoted to a walk-forward-tested pricing-bias strategy, paper-traded it with loss limits and caught the bias fading out of sample

Matchbook | *C++20, CMake* *github.com/Ali-Haroon3/matchbook*
- Engineered a price-time priority limit order book and matching engine: 15M+ ops/sec at 48ns median and 210ns p99 latency, using flat-array price levels, occupancy bitmaps and pooled allocation
- Added a Nasdaq ITCH 5.0 feed handler replaying 3M msgs/sec over a lock-free SPSC queue; clean under ASAN/UBSAN

SKILLS

Languages: Python, TypeScript/JavaScript, Java, C++, Rust, Swift, C#, SQL, R
AI & Data: AI agents, MCP, RAG, PyTorch, TensorFlow, pandas, NumPy, PostgreSQL, SQL Server, IBM DB2
Frameworks: Spring Boot, FastAPI, Flask, React, Next.js, Angular, ASP.NET Core, ARKit, Metal
Infrastructure: Docker, Kubernetes, AWS, GCP, Azure, Jenkins, GitHub Actions, Grafana, Prometheus
